

ONTARIO EAST

THE PORT OF PRESCOTT

Strategically located on the St. Lawrence Seaway system, the Port of Prescott provides inland deep water dockage for shipping and receiving dry bulk cargo such as grain, aggregates, road salt, slag etc.

The Port is in close proximity to several major highways (401, 416) that provide access to local, national and international markets. A port spur line connects to the CN Windsor-Quebec City rail corridor with service for CP customers. A nearby international Prescott-Ogdensburg bridge provides access to the USA via New York State.

There are terminal sites for lease and lands available for development.
